EXPERIENCE

Data Engineer

Jan 2026 – Present

C-Space Manufacturing

Los Angeles

- Built ETL pipelines with scheduling logic, automating data processes and workflows via trigger-based refresh cycles
- Leveraged Azure DevOps for cloud-based ETL pipeline testing and management, ensuring reliability and data accuracy
- Developed and tested AI-assisted API workflows with parameterized queries, improving retrieval efficiency by 25%
- Designed data models and mapped schemas across platforms, ensuring accurate data quality and integrity
- Performed software verification and validation testing to ensure ETL pipelines met QA and data accuracy standards

AI/ML Research Intern

Jun 2025 – Sep 2025

BiasLab

Irvine, CA

- Conducted experiments on HDC models, improving genome sequence detection accuracy from 65% to 75%
- Automated data preprocessing and augmentation using NumPy and Pandas, accelerating training workflows by 300%
- Applied AI tools to automate error analysis and identify recurring patterns across ML experiment workflows

Data Engineer Intern

Nov 2024 – Jan 2025

Curtin Maritime

Long Beach, CA

- Developed Python automation tools to streamline internal engineering workflows, reducing manual processing by 30%
- Built automated data validation tests to detect critical inconsistencies and prevent malformed production records
- Diagnosed production issues using application system logs, identifying root causes and resolving service failures

Software Engineer Intern

Jun 2024 – Aug 2024

Headstarter

Long Island City, NY

- Deployed scalable backend services using AWS App Runner and CloudFront with Git-based CI/CD pipelines
- Developed and optimized rate-limited REST endpoints for 100+ users, improving reliability and preventing errors
- Built an AI agent automating LLM-driven workflows over REST APIs, streamlining integration and cutting research time
- Mapped GenAI outputs to a 12-field schema across services, enabling accurate data integration and bookable links

Technical Lead and Event Coordinator

Aug 2023 – Jun 2024

Artificial Intelligence @ UCI

Irvine, CA

- Led AI workshops and coding sessions, collaborating with cross-functional stakeholders to increase engagement by 30%
- Organized guest speaker events with industry professionals, offering valuable networking and career opportunities

PROJECTS

[UFA Fantasy App](#) | *Python, SQL, HTML, CSS, JavaScript, Flask, AWS, Docker*

Mar 2026

- Built and launched a backend-driven Fantasy Football App using Flask and SQL, tracking stats for a local 80-player league
- Enhanced SQL database performance, reducing query time by 30% and significantly boosting overall app speed
- Deployed containerized application using AWS and Docker, improving scalability and ensuring reliable performance

TECHNICAL SKILLS

Languages: Python, SQL, C++, Java, Go, JavaScript, TypeScript

Libraries/Frameworks: PostgreSQL, MySQL, PyTorch, TensorFlow, scikit-learn, Node.js, Next.js

Tools: Git/GitHub, Azure, AWS, ETL, Claude, Codex, Power BI, Scrum, Jira, Docker, Kubernetes, Visual Studio

Skills: Artificial Intelligence, Cloud Computing, Data Processing, Data Modeling, Agile, CI/CD, Generative AI, Prompt Engineering

Certifications/Achievements: AWS Certified Cloud Practitioner, UCI Distinguished Student, UCI Dean's Honor List (x4)

EDUCATION

Georgia Institute of Technology – Atlanta

M.S. in Computer Science

Expected Graduation: Dec 2027

University of California – Irvine

B.S. in Computer Science | 3.85 GPA

Dec 2025
